SUMMARY

Frontend engineer with 7+ years in React, TypeScript, and Next.js. I like complex product interfaces — dashboards, tables, editors — and I'm good at making slow apps fast and bringing old codebases up to date. Right now I build the frontend of a booking platform for tour operators and cover part of its NestJS backend (~30% of my time). I work with AI coding agents daily (Claude Code) and know how to make that workflow reliable in a team. Open to Senior roles, remote.

EXPERIENCE

DocSpace Senior Frontend Engineer · Work-management platform 2024 — 2026

- Owned 4 of 11 packages in a Turborepo monorepo (team of ~15): Projects, Pages, Flow, and Meet (LiveKit video).
- Shipped 15+ product features — from sprints and kanban to a project-creation wizard.
- Made heavy screens (task lists, kanban) ~2× faster — virtualization, memoization, fewer re-renders.
- Mobile adaptivity of key screens; unified i18n for shared components (Mantine 8, i18next). Stack: React 18, Vite, Zustand, Redux Toolkit, TanStack Query.

School Bus Manager Senior Frontend Engineer · School bus SaaS 2023 — 2024

- Led the frontend of a school-bus operations product (routes, schedules, bus and driver tracking): admin app, parent portal, and the company website.
- Refactored an old, hard-to-maintain codebase incrementally without pausing production: upgraded React, moved class components to functional, Webpack → Vite (dev rebuilds ~12s → near-instant), server state → TanStack Query, TypeScript across the codebase.
- Rebuilt the company website from scratch on Next.js — SSR, server-side data fetching, SEO — and shipped it to production.
- Result: heaviest screens load up to ~7× faster, fewer bugs; set up project structure, code style, linters, and automated checks for the team.

Zoftify Senior Frontend / Full-stack 70/30 · Product studio 2021 — 2023 · 2025 — PRESENT

- Own the frontend of two products: a booking platform for tour operators (130+ pages, team of 5–8) and a services marketplace.
- Booking platform: public booking site plus operator dashboards — tours, bookings, invoices, payments. Next.js/React on the frontend, shared packages for UI, bookings, money, and i18n in a monorepo.
- Frontend is my main focus, but I also take backend tasks (~30% of the time): NestJS + Prisma on PostgreSQL, AWS (S3, SQS, Lambda for file processing and PDF rendering), JWT auth with roles, Swagger, Sentry, Docker.
- Added payments (Stripe, Airwallex), PDF generation (invoices, vouchers), transactional email (SendGrid + react-email), and multi-currency / multi-language support end to end.
- Optimized load speed — noticeably faster on the slow connections some operators use.
- Marketplace: built the admin and dashboards with no-code content management, so the team launches campaigns on its own.

Aeroidea Frontend Engineer · Digital product studio 2020 — 2021

- Joined a product before launch and took it to production.

Built a no-code page builder in the admin (sliders, carousels, event grids) — marketing ships landing pages in hours instead of days, without a developer.

Sped up page loads by ~30% through caching and rebalancing work between server and client.

Extracted shared components into packages reused across 3–4 studio projects; added accessibility (high-contrast themes, font-size controls); mentored juniors and ran code reviews.

Helium 10 Frontend Developer · US SaaS for Amazon sellers 2018 — 2020

Built Adtomic — Amazon advertising automation: sellers manage campaigns, bids, pricing, and competitor tracking in one place instead of spreadsheets.

Built an internal UI library (a few dozen components) reused by 4+ teams.

Built data-heavy dashboards: tables with thousands of rows, charts, and real-time bid updates over live Amazon data.

SKILLS

Frameworks	React (incl. 19), Next.js, TypeScript
State / Data	TanStack Query, Redux Toolkit / RTK Query, Zustand
UI / Styling	Tailwind CSS, Mantine, Radix UI, Styled Components
Testing	Playwright, Cypress, Jest, React Testing Library
Build & Tooling	Vite, Webpack, Turbopack, Storybook, ESLint, Prettier
Backend (~30%)	Node.js, NestJS, Prisma, PostgreSQL, REST, WebSocket (Socket.IO), AWS (S3, SQS, Lambda), Docker
AI-assisted dev	Claude Code (agents, subagents, MCP), project rules & skills for AI, AI-driven code review and test generation, prompt / context engineering
Architecture	FSD, Monorepo, Design Systems, Core Web Vitals, WCAG
Integrations	Stripe / Airwallex, NextAuth, FeatureHub, i18n (next-intl), Lexical
